A-B-C 010 SWIRL

TECHNICAL SPECIFICATIONS

DESIGNED BY

SIMON KLENELL, KRISTOFFER SUNDIN
AXEL VON FRIESEN & PETER TÖRNQVIST

Pendant providing diffused light. Diffuser consisting of an externally free handblown opaline glass. Free handblown means that the glass is blown without a mold which gives each lamp its own unique slight variation in shape and opacity. The glass is blown by Simon Klenell and the team at Sthlm Glas. The swirl effect is created during the blowing process of the glass. Colours are applied and rotated which creates a unique pattern for each piece.

Comes with a threaded pipe and wing nut component that connects the g9 light holder to the glass.

White rubber cable.
